

OVERVIEW & CAPABILITIES

Why Choose SNA International?

Led by highly respected members of the scientific community, SNA International provides proven scientific expertise and the ability to manage all elements of forensic science operations, biometric programs and mass fatality response planning programs. Unlike other providers who supply only one piece of the puzzle, we deliver the entire solution to our clients. This results in greater coordination, more efficient and effective operations, and a lower overall cost.

Our Full Range of Services

In support of our primary services, we provide staffing support and all associated project management, strategic planning, gap analysis, and associated business services, along with research and information technology support. We are the single solution to a wide range of client needs.

Background

SNA International provides superior forensic consulting services to the government and commercial sectors. Founded in 2002, we have steadily expanded the scope of our services but while our business lines have grown and our client base has become more diverse, our commitment to superior scientific analysis has never wavered.

We are a company founded and guided by scientists and we are committed to the scientific principles that guide our disciplines. Our leadership team is comprised of individuals who possess more than a century of combined experience within the forensic sciences and mass fatality response fields. We publish in peer-reviewed journals (e.g., *Science*), are active in our respective fields, and serve on relevant scientific committees. This ensures that the services provided to our clients represent the most up-to-date methodologies and techniques available.

In addition, we use Project Management Institute (PMI) advocated processes and procedures in all our projects to increase efficiency, eliminate unnecessary costs and provide best-value.

Experience/Past Performance

*Our performance is highly regarded.
Since 2002, we have amassed a wide range of clients.*

US Department of State (Iraq)

Enhanced Iraqi university scientists' technical capacity to identify human remains from mass fatalities by 243%.

US Department of Justice (US)

Provided advisory services resulting in recommendations for enhanced biometric deconfliction and data management.

Physicians for Human Rights (Libya)

Delivered realistic assessment of the requirements to provide identification of remains from both Gaddafi's reign and the recent revolution.

US Defense POW/MIA Accounting Agency / Armed Forces Medical Examiner System

Provide forensic scientists in support of the world's most complicated human identification effort: the recovery and identification of US Service Members from current and past conflicts.

US Department of Homeland Security

Implement DNA as a lights-out biometric to reduce fraud and illegal immigration, detect US adversaries before they enter our country and reunite families following disasters.

US Army Past Conflict Repatriations Branch

Developed detailed processes, procedures and case tracking tools, exceeding client case processing requirements by 21%.
